

Malwarebytes **ANTI-MALWARE** MOBILE

Lean, powerful anti-malware for the Android device

The people you trust to protect your computer now protect your Android device. Malwarebytes Anti-Malware Mobile guards your identity and personal data on-the-go. So you and your Android smartphone or tablet are safe from malware, infected applications, and unauthorized surveillance. Wherever you are. Whenever you go.

Features and Benefits

Anti-Malware/Anti-Spyware

Detects and eliminates spyware, including monitoring (spy phone) apps, Trojans, viruses, and worms in real-time to ensure your personal identity and data are protected. Scans fast and with customizable notifications so you are protected without being bothered. (You also have the option to disable real-time protection if desired.)

Scan Scheduler

Schedules automatic scans so even if you forget, Malwarebytes Anti-Malware Mobile won't.

Automatic Database Updates

Updates the threat database automatically so your security is never outdated. Can update its database over a WiFi network to reduce your data usage.

Privacy Manager

Identifies the personal information each app can access so you can uninstall or change the settings on apps that may pose an unacceptable risk to your privacy. These categories include apps that:

- Can Cost You Money (access premium services)
- Track Location

- Have Network Access (access the Internet)
- Read Personal Info (access your contacts list, phone numbers, browsing history)
- Access Secure Settings (access your Personal Identification Numbers and access codes)
- Access Calendar
- Monitor Calls (record your phone calls)
- Access Text Messages (read your text messages)
- Access Storage (can write to and read files in memory)
- Access Accounts (access added system accounts, including Google accounts)
- Control Hardware (access your hardware, including, but not limited to, camera and NFC adapter)

Security Audit

Identifies security vulnerabilities and suggests steps to close them for stronger protection. The vulnerabilities detected include:

- Whether applications can be installed from an unknown source
- If screen lock activation is enabled
- If development mode is enabled
- Whether you will be notified if unsecured WiFi is available
- If NFC is activated
- If GPS tracking is activated

Potentially Unwanted Programs (PUPs) Detection

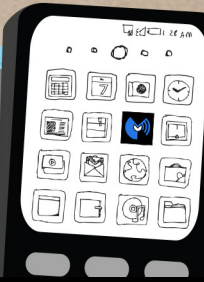

Detects PUPs so you can remove programs (including adware) that degrade your mobile experience.

Web Protection

Alerts you if a link to a malicious website is detected in an incoming text message (SMS).

Malwarebytes ANTI-MALWARE MOBILE

Lean, powerful anti-malware for the Android device

Find My Phone

Links seamlessly to Android Device Manager's device location features so your device can be located, locked, or reset if it is lost or stolen. You'll always know where your device is and that your files stored on it are secure.

Application Manager

Identifies the status of an application as "Running" or "Installed" or both and its CPU usage so you can terminate non-essential operations to conserve battery life and system resources, and to identify unauthorized applications.

Application Whitelisting

Enables you to "allow" legitimate applications Malwarebytes Anti-Malware Mobile has marked as suspicious so that future scans run without flagging the whitelisted applications incorrectly.

Application Sharing

Allows you to share Malwarebytes Anti-Malware Mobile with friends via Facebook, Google+, LinkedIn, and other social media.

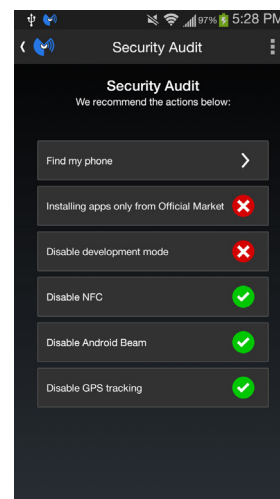

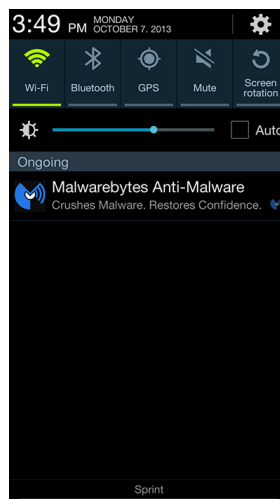

Email Feedback

Opens a blank email addressed to Malwarebytes using the phone's default email program so you can send instant feedback and feature requests.

Notification Customization

Allows you to set Malwarebytes Anti-Malware Mobile notifications to your personal preferences:

- Set Malwarebytes notification icon to "On", "Off", or "Greyscale"
- Display/hide the following notifications in the notification tray:
 - Scan progress
 - Scan result
 - Database update
 - Scheduled scans

System Requirements: Android 2.3 and later
