Malwarebytes
SECURE BACKUP

Online backup integrated with anti-malware protection

Get the only online backup that protects your files against malware

Your hard drive crashes. You hit "Save" without thinking and an important version is overwritten and lost forever. Someone accidentally deletes all the wedding pics. You restore an infected file to your new computer and end up having to start all over again.

Stuff happens.

Having a backup is a good idea. Having a backup that you can be confident is completely free of malware is a better idea.

Malwarebytes Secure Backup automatically backs up your important documents, music, photos, and videos to our state-of-the-art online data center. And these files are transmitted using military-grade encryption for complete safety.

But before Malwarebytes Secure Backup uploads a file, it scans the file for malware using Malwarebytes Anti-Malware. So now you can confidently save files that you know are clean. And you can share these clean files with friends by simply sending URL links to the files stored at our data centers.

Unlike other backup services, Malwarebytes Secure Backup won't allow you to back up, restore, or share infected files or malware. It's just a good idea…made better.

Features and Benefits

Integrated Anti-Malware/Anti-Spyware
Detects zero-hour and known viruses, Trojans, worms, rootkits, adware, and spyware to ensure only clean files are backed up.

Online and Local Backups and Restores
Backs up your files up to the cloud and your designated local drive so you have double the security and twice the flexibility.

Backs Up Unlimited Devices
So you can save every file on every device with the convenience and economy of one Malwarebytes Secure Backup license.

Automatic Backup
Schedules your backups so you don't have to think about it.

Deleted File Recovery
Ensures that deleted files are automatically archived so you'll never lose an important file again.

Unlimited File Versioning
Backs up every version of the file so you'll always be able to restore an overwritten file.

Web Management Portal
Allows you to share, access, and download your backed-up files from any web browser.

File Selection Wizard
Enables you to pick and choose which files are backed up so you can make the best use of your storage allotment.

Automated Email Reports
Track the status of your backups so you'll always know what has and hasn't been backed up, and when.

Malwarebytes
SECURE BACKUP

Online backup integrated with anti-malware protection

Network Drive and External Drive Support
Enables you to conveniently back up files on your network drives and external drives so every file is protected.

**Category Tier III and Tier IV Data Centers**
Are used to store your files so you'll always have access to them. ("Tier III" and "Tier IV" indicates a guaranteed availability of more than 99.9 percent of the time.)

Military Grade Three-Tiered Encryption
Protects your files at three critical levels (locally, during upload, and in the online data center) so you are safe from hackers eavesdropping on your WiFi connection.

Private Key Encryption
Secures your files under a password chosen by you, and known only to you, for complete safety.

Tech Specs
