

# MALWAREBYTES REMEDIATION CONNECTOR SOLUTION

Extends your EDR solution with the trusted standard in automated endpoint remediation

When a cyberattack hits your machines, speed is one of the most critical factors in the remediation process to avoid lateral movement and further damage to the organization. Many security teams that have invested in an endpoint detection and response (EDR) solution have discovered remaining challenges:

- Less than optimal eradication that does not remove all artifacts
- Complexity with clean up that still requires reimaging at times and manual efforts
- Response processes that require scripts and IT support tickets

When you add automated remediation from Malwarebytes to your current EDR solution, you gain fast, effective remediation that thoroughly removes dynamic and related artifacts to deliver complete clean up.

## PRODUCT OVERVIEW

**Malwarebytes Remediation Connector Solution** works seamlessly with leading EDR platforms to enhance and streamline your response efforts with automated and thorough malware removal. It alleviates manual efforts and advances your security practices with a solution that accelerates response times with fast and thorough remediation.

Most solutions only focus on removing the active malicious executables—this doesn't provide complete remediation. Our propriety approach also detects and removes the dynamic and related artifacts. This gives you complete disinfection of malware persistence mechanisms, so you'll have confidence that your machines are clean.

## HOW IT WORKS

Our API connectors make it simple to integrate with other vendor EDR solutions, so you can get up and running quickly and easily. Malwarebytes Remediation deploys as a non-persistent agent that performs the remediation and then cleanly removes itself from the device. This provides powerful malware removal, without leaving a persistent agent footprint. And it does all this transparently to your end users.

With our automated approach, Malwarebytes Remediation creates greater efficiency that saves analyst resource time, preserves user productivity, and improves your company's security posture.

## Delivering successful customer outcomes

Organizations that have adopted Malwarebytes Remediation are experiencing significant advantages:

- **Fully automated endpoint remediation** that delivers high confidence outcomes
- **Streamlined efforts** that alleviate resource impact on your security and IT teams
- **Thorough clean up** that delivers an MTTR of minutes, rather than hours or days

## DEEP THREAT INTELLIGENCE THAT DELIVERS EFFECTIVE REMEDIATION

Our cyber intelligence expertise in remediation means we have a deep understanding of the attacks that successfully execute on business devices. This provides your organization with a solution that is powered by threat detection and remediation intelligence from millions of Malwarebytes protected endpoints.

## WORKSTATION AND SERVER SUPPORT

The solution provides seamless remediation for Microsoft Windows workstations and servers, regardless of location on the network. This unifies your endpoint and server remediation processes across distributed locations and a dispersed workforce.

## INDUSTRY-LEADING TECHNOLOGY

Malwarebytes was issued some of the earliest patents for remediation and ransomware detection, including one for file comparison and three for behavior-based detection. We leverage years of security expertise in remediation to provide you with solutions powered by threat intelligence from millions of Malwarebytes-protected endpoints, both business and consumer.

The Malwarebytes Remediation Connector Solution makes it easy to integrate our security products with other vendor EDR, SIEM, SOAR, and ITSM solutions to further drive automation and compatibility. Malwarebytes delivers a high return on investment (ROI), and we're also known for our superior service and support.
