

Endpoint protection that helps global ops run as smoothly as an engine

Ransomware remediation

consumed 20
hours/week

Effective protection

stops ransomware
in its tracks

Broad global visibility

across
2,400 endpoints

Challenges

As a leading automotive manufacturer and distributor with a fast-paced business that operates in several facilities across the globe, managing the IT environment is a critical function. Keeping the company's 2,400 servers and machines running smoothly across countries and time zones is an important responsibility for the Information Security and Infrastructure teams, so they take a layered security strategy to safeguard the machines.

When the team assessed that ransomware was continuing to slip on to endpoints, they decided to take a proactive approach to better fortify the company's endpoints.

Overview

- ✓ **Customer:**
Global Automotive Company,
2,400 endpoints
- ✓ **Industry:**
Automotive manufacturer
and distributor
- ✓ **IT Environment:**
Endpoint security
across 4 locations
- ✓ **Solution:**
Malwarebytes Endpoint
Detection & Response,
Malwarebytes Endpoint
Detection & Response
for Servers

“A few years ago, malware and ransomware attacks were regularly hitting our systems, as much as 20 times within a few weeks. It was consuming a lot of time from our network admins. They were spending half of their day recovering machines. We decided we've got to do something about it,” said the company’s information security (IS) manager.

- **Insufficient protection** from malware and ransomware attacks
- **Lengthy remediation process** that was becoming a half-time job
- **Impacted user work** while waiting for an infected machine to be restored

Almost immediately after rolling out Malwarebytes to our servers and endpoints, the ransomware stopped—literally stopped. Of course, that made management and the administrators happy, and we've never looked back. We've been happy Malwarebytes customers ever since.

**- Information Security Director,
Global Automotive Manufacturing Company**

Reasons for Choosing Malwarebytes

The information security team researched vendor options by reading analyst reports and reaching out to other colleagues in the industry. “We talked to people about what they were doing to deal with ransomware. That led us to Malwarebytes and its reputation as a big player in ransomware protection. We did a POC to see if Malwarebytes was everything that we were hearing, and it turns out that it was. We made the vendor selection and had Malwarebytes deployed within a couple of weeks,” said the IS manager.

- **Strong brand reputation** as a powerful solution for ransomware protection
- **Fast, two-week deployment** to roll out to the company’s global endpoint fleet
- **Ease of use** with a solution that’s easy for team members to manage and maintain

How Malwarebytes Solved the Problem

“Almost immediately after rolling out Malwarebytes to our servers and endpoints, the ransomware stopped—literally stopped. Of course, that made management and the administrators happy, and we've never looked back. We've been happy Malwarebytes customers ever since,” said the IS manager.

He continued, “The ability to use a vendor that has a reputation for making it easier for remediation is a key value for us. That's one area where Malwarebytes EDR really shines, especially with automated remediation and ransomware rollback. Other EDR vendors don't offer great remediation features, so that's one thing that we really liked about Malwarebytes EDR.”

- **Clear visibility** and details on the security status across all the company's global endpoints
- **Powerful remediation capabilities** that let you roll a machine right back into production, in minutes instead of hours
- **Effective protection** that stops malware and ransomware attacks in its tracks
