Malwarebytes Endpoint Protection
Powerful malware protection for the endpoint. Built for any size organization.

Today, even basic malware campaigns are automated—enabling cybercriminals with few resources to launch sophisticated attacks against organizations of all sizes. To fight back, businesses deployed multiple layered, yet siloed, endpoint security solutions, which threat actors soon defeated by exploiting the gaps in between. These synergistic trends mean there has never been a greater need for a unified, comprehensive approach to endpoint protection that's strong enough to thwart advanced attacks, but agile enough to adapt to the threat landscape.

Enter Malwarebytes Endpoint Protection, a complete malware protection and remediation solution with predictive threat detection, proactive threat blocking, and integrated end-to-end protection. Driven from the cloud through a single pane of glass, Malwarebytes Endpoint Protection provides flexible management and speed for organizations of all sizes.
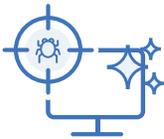

Precise protection without bloat.

Stops malware and blocks bad behavior with a small footprint agent.

Innovation that outpaces malware.

Goodware-trained machine learning produces a fast and definitive verdict.

Complete solution, any size organization.

Maximizes Security team flexibility and productivity.

Explore the advantages

Precise protection without bloat.

Agent architected for performance
Many endpoint security platforms stuff endpoints with an ever-increasing store of malware signatures and slow performance with brute-force scanning algorithms. In contrast, Malwarebytes uses a single, low footprint agent that quickly pinpoints and blocks malicious code from running without impacting device performance.

Comprehensive web protection
Our web protection technology proactively prevents users from accessing malicious sites, malvertising,

scammer networks, and suspect URLs, as well as downloading potentially unwanted programs and potentially unwanted modifications.

Hardened devices and apps
Malwarebytes hardens your devices by blocking exploits, stopping remote code execution, and breaking communication with hostile malware servers to dramatically reduce your organization's attack surface.

Behavioral-based blocking
Our behavior-based analysis provides near real-time identification of behavior that is undeniably hostile

and automatically blocks the threat, delivering the most proactive protection on the market today.

Zero-day prevention
Malwarebytes applies signatureless payload analysis and anomaly detection to proactively identify and block malware attempting to exploit hidden vulnerabilities in your organization's operating systems and applications.

Innovation that outpaces malware.

The right type of machine learning
Instead of training on malware, the Malwarebytes model is trained to recognize goodware—properly-signed code from known vendors. The result is a predictive malware verdict that becomes increasingly faster to determine and incrementally more precise.

Fastest threat intelligence on the market
Benefit from Malwarebytes detection and remediation intelligence collected from millions of corporate and consumer-protected endpoints. Even brand-new, unidentified malware is typically eliminated before it can impact your endpoints.

Unified detection funnel catches more threats
Malwarebytes applies behavioral monitoring and machine learning to profile threats across web, memory, application, and files. Successive learnings along the detection funnel provide increasingly higher detection rates with increasingly lower false positives.

Traces the infection, maps the removal
The Malwarebytes Linking Engine traces every installation, modification, and process instantiation—including in-memory executables that other anti-

malware packages miss—mapping a complete picture of the threat that enables full remediation.

Lethal "one-and-done" remediation
Applying in-depth insights from the Linking Engine, Malwarebytes thoroughly and permanently removes both the infection and any artifacts, delivering lethal "one-and-done" remediation.

Complete solution, any size organization.

Complete endpoint security solution driven by a single pane of glass
A full suite of endpoint security functionality and automation capabilities driven from the Malwarebytes Cloud and accessed from an intuitive UI make fighting malware a matter of clicks, not scripts.

Prioritizes security team productivity
Your security team can traverse from the global dashboard down to identified threats and quarantined devices in just a few clicks. Scanning and remediation is automated across a single department or thousands of devices at a time.

Analyzes the impact so you don't have to
Malwarebytes provides extensive threat analysis background along with assessment of its potential impact. Your CISO can save time and effectively communicate potential impacts to executive leadership.

Scalable to the largest enterprise
Our solution applies the power of the cloud to scale to even the largest organization's needs, efficiently detecting advanced threats, and providing a globally consistent and speedy response.
