

MALWAREBYTES MOBILE SECURITY

Unified protection for corporate-owned or personal devices

Mobile Devices: The Cybersecurity Gap

Mobile devices are a key part of today's modern business, so smartphones and tablets have become richer targets for exploitation and cyberattacks, especially since employees carry them into places where they can be lost, stolen, or breached through rogue Wi-Fi. Whether employer-provided or employee- or student-owned, mobile devices are tempting targets for malicious threat actors.

Yet, those mobile devices remain under-protected. Not surprisingly, 97% of organizations have faced mobile threats and 46% have had at least one employee download a malicious mobile app that threatened the corporate network and data.¹
